

Quality & Confidence – ALL IN ONE

The **Screw Fixation System** provides a compact solution for the temporary fixation and stabilization of bone transplants, suitable resorbable and non-resorbable bone replacement materials, and membranes for the alveolar ridge. Two color coded systems in 1.5mmD MICRO (blue) and 2.0mmD MINI (red) make easy and rapid identification of the parts possible and simplifies parts matching. This modular storage system permits individual configuration and the open design aims to ensure convenient access during cleaning and sterilization. Fixation screws and mesh are manufactured from pure titanium or titanium alloy. They are biocompatible, corrosion-proof and nontoxic in the biological environment. They allow imaging virtually free of artifacts.

SECURE & SIMPLE

The **Screw Fixation System** comes with power grip for secure and stable transfer to the surgical site. The screws are easily picked up and have a reliable connection to the driver.

COMPACT

The screw cartridges of the **Screw Fixation System** are more than simply storage containers. The cartridges make organization and sterilization of screws easy. An imprinted four data identification system provides traceability.
