

Locator® Overdenture Attachment

Improving your patient's quality of life.

Retaining an overdenture with implants can greatly improve chewing function for the patient. With the *Locator* Overdenture Attachment from Zimmer Dental, patients are able to easily seat their overdenture, which will help prevent worn or destroyed attachments caused by improper seating. The *Locator* Overdenture Attachment is the ideal solution for overdenture restorations.

- **Low Profile.** A low vertical height makes the *Locator* Overdenture Attachment an effective option for treatment of a wider range of patients.
- **Easy for Patients.** Self-locating attachment gives patients the ability to easily position and place their overdentures.
- **Predictable.** Dual retention and tremendous durability ensure long-lasting stability and performance.¹
- **Versatile.** A variety of options for retention and angulation correction let you tailor the case to fit the needs of the patient.

The *Locator* Overdenture Attachment's unique combination of features offers outstanding advantages for you and your patients. The durable, low-profile design can be used in a wide range of overdenture cases and makes it easy for patients to seat their own denture correctly every time.

Low Vertical Height:

- Low-profile design provides a critical advantage in tight interocclusal spaces.
- Total abutment and attachment height is as low as 2.5 mm on a *Tapered Screw-Vent*® Implant.
- A variety of cuff heights allows you to accommodate varying tissue depth.

Self-Aligning Design:

- Self-locating design helps guide the attachment into place on the abutment.
- Patients can easily position and place their overdenture every time.
- Reduces wear on the nylon liners due to improper seating.
- Longer-lasting liners mean fewer recall visits for the patient.¹

Incredible Durability:

- The *Locator* Overdenture Attachment retains on the inside and outside of the abutment for a stronger, longer-lasting fit.
- The unique dual retention design provides nearly twice the retentive surface area over internal retention attachments.
- The nylon male pivots inside the metal housing for a resilient connection.

Versatility:

- Flexibility in angulation and retention with a variety of nylon inserts.
- Three levels of retention are available for cases up to 10° off axis per abutment: 1.5 pounds (blue), 3 pounds (pink) and 5 pounds (clear).
- Accommodates up to 40° of divergence for two implants (or 20° for one implant) with use of special nylon males with two levels of retention: 4 pounds (green) and 1.5 pounds (red).

The self-aligning design of the *Locator* Attachment system helps guide the attachment into place on the abutment.

Locator Overdenture Attachments are available for *Tapered Screw-Vent*, *AdVent*®, *SwissPlus*® and *Spline*® Implant Systems. For part numbers and pricing, please refer to the Zimmer Dental Price List for each product line.
